“

Qvalia's finance process technology and expertise in transaction management has enabled us to improve our routines, reduce invoice errors and cut costs. It's a highly recommended and useful service.

Åke Bengtsson

CFO

Region Halland

Region Halland is one of Sweden's nine regional councils. It is the self-governing local authority for the public health care system and public transportation on the western coast of Sweden, serving some 333 000 citizens. The region manages three major hospitals, emergency services and the public transport company, museums and more.

Problem

With almost 200,000 purchase transactions per year, the regional council identified the need to assure the quality of their finance data, manage their processes more efficiently and take steps towards increased automation.

The transactions included most aspects of the council's operations, from healthcare-related purchases to transportation.

Solution

Qvalia has since 2014 provided Region Halland with its software platform and analytics expertise to continuously improve processes and correct records and manage healthcare related compensation schemes.

The scope includes invoice handling, accounting, payments, compliance, and reporting.

Result

As a result of implementing Qvalia into their processes, Region Halland has improved their transaction management and accounts payable routines.
